### **DETAILED ACTION**

1. Claims 8-10, 17-19, 26, 27, 34, 35 and 37 have been examined. Applicant amended claims 8, 17, 26, 27, 34 and 37, and canceled claims 1-7, 11-16, 20-25, 28-33 and 36.

#### ***Response to Amendment***

2. The objections to the specification is withdrawn as the amendments to the disclosure overcome the objections.

#### ***Response to Arguments***

3. Applicant's arguments, see Remarks on pgs. 14-16, filed October 25, 2004, with respect to claims 8-10, 17-19, 26, 27, 34, 35 and 37 has been fully considered and are persuasive, specifically that even though the Schneier reference teaches secret splitting which divides sensitive information to a plurality of holders, and further teaches timestamping received hash values by appending a timestamp to the received hash then digitally signing the result, Schneier does not disclose how to make the independently acquired times from each of the time acquisition times coincide (see Remarks, pg. 15, 1<sup>st</sup> full paragraph, 3<sup>rd</sup>-5<sup>th</sup> sentences). The 103 rejections to claims 8-10, 17-19, 26, 27, 34, 35 and 37 have been withdrawn.

***Allowable Subject Matter***

4. Claim 8-10, 17-19, 26, 27, 34, 35 and 37 are allowed.
5. The following is an examiner's statement of reasons for allowance: The claims 8-10, 17-19, 26, 27, 34, 35 and 37 are drawn to a timestamping system. The closest prior art Haber, Rohatgi and Schneier teach methods of timestamping similar to the instant claimed invention, except none of Haber, Rohatgi nor Schneier teach steps nor means to:
  - a. sequentially acquire a time information given in a prescribed constant incremental time unit, in response to a received digital document, at each one of a plurality of time acquisition units in the server device, independently from other time acquisition units;
  - b. generate a plurality of time stamped digital documents at each one of a plurality of combining units, provided in correspondence to the plurality of time acquisition units in the server device, by sequentially combining the received digital document with the time information sequentially acquired by a corresponding one of the time acquisition units, independently from other combining units;
  - c. generate a digital signature at each one of a plurality of digital signature units, provided in correspondence to the plurality of combining units in the server device, for each time stamped digital document generated by a corresponding one of the combining units, independently from other digital signature units;

- d. select a plurality of digital signatures, one digital signature per each of the digital signature units, which are generated by the plurality of digital signature units for one time stamped digital document of an identical time, from a plurality of digital signatures generated by the plurality of digital signature units, and generating a unified digital signature from the selected digital signatures; and
  - e. generate a time stamp token from the one time stamped digital document and the unified digital signature generated.
6. These features of the independent claims render claims 8-10, 17-19, 26, 27, 34, 35 and 37 allowable.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
